

The project 'Improvement of Microclimatic Conditions in the locality Na Radouči'

Dear residents of Jana Palacha street, Na Radouči and 17. listopadu.

The complete revitalization of the inner yard has already started, please see the marked area in the map on the right.

The Statutory City of Mladá Boleslav received a contribution for this project from Norway Grants and State Environmental Fund of the Czech Republic.

At present, the locality Na Radouči is a place with extreme vulnerability to drought and heat waves, which results from the elaborated Adaptation Strategy on Climate.

The implementation of the project will improve the microclimatic conditions of the inner yard.

The inner yard revitalization involves a complete layout, planting new vegetation, building some new water components, children's playground and other street furniture.

During the implementation of the project, movement in the reconstructed area will be restricted. We kindly thank you for your understanding.

Thanks to the modifications, the inner yard will become a more attractive and welcoming place for residents to spend their free time.

The Statutory City of Mladá Boleslav

STATE ENVIRONMENTAL
FUND OF THE
CZECH REPUBLIC

Working together for a green Europe
Supported by Norway through
the Norway Grants.
